

ADR Template Evaluation Questionnaire

This questionnaire is a data collection instrument developed within the context of the DESMET method to evaluate Architectural Decision Record (ADR) templates. The questionnaire seeks to capture perceptions of clarity, completeness, usefulness, and effort in the use of different ADR templates.

FS1.01 - Delimitation of the decision field: > In the ADR template used, were you able to clearly identify the section or space intended to document the Architectural Decision (i.e., the chosen solution to the problem)?

- ☐ The location to document the decision was clear and well-defined
- ☐ The location to document the decision was unclear, raising doubts about where to write it
- ☐ I could not identify a specific location to document the decision

FS1.02 - Delimitation of the context field:

In the ADR template used, were you able to clearly identify the section or space intended to document the Context (i.e., the problem, the circumstances, and the forces that motivated the decision)?

- ☐ The location to document the context was clear and well-defined
- ☐ The location to document the context was unclear, raising doubts about where to write it
- ☐ I could not identify a specific location to document the context

FS1.03 - Delimitation of the consequences field:

In the ADR template used, were you able to clearly identify the section or space intended to document the Consequence (i.e., the results, positive and negative impacts, and the future state of the system after the decision is implemented)?

- ☐ The location to document the context was clear and well-defined
- ☐ The location to document the context was unclear, raising doubts about where to write it
- ☐ I could not identify a specific location to document the context

FS2.04 - Objectivity: Evaluate the ADR template you used by positioning your perception on the scale below. Where do you feel this template fits?

- ☐ Very ambiguous: The template allows for vague descriptions, lacking direction.
- ☐ Ambiguous: The structure provides some guidance, but still allows for generic descriptions.
- ☐ Neither ambiguous nor objective: The template has different fields for decision and context, but does not prevent ambiguities or redundancies.

- ☐ Objective: Well-defined structure. Each part of the decision has its own designated place with clear examples to avoid ambiguities and redundancies.
- ☐ Very objective: Forces clear and direct writing, leaving practically no room for ambiguity.

FS3.03 - Recommendation: On a scale of 0 to 10, how likely are you to recommend this template for documenting architectural decisions?

*The last questionnaire question was to upload the log file from the documentation platform
