Metrics definition

FS1: Structural Completeness

FS1.01 - Decision Field Delimitation: To understand if the field dedicated to the Architectural Decision being documented (i.e., the architectural solution choice made for a problem) is defined.

Measure: Is the decision field defined?

0 – No: The decision field is not defined, leading to a possible lack of clarity.

1 – Yes: The decision field is well-defined.

FS1.02 - Context Field Delimitation: To understand if the field dedicated to the context of the decision being documented is defined.

Measure: Is the context field defined?

0 – No: The context field is not defined, leading to a possible lack of clarity.

1 – Yes: The context field is well-defined.

FS1.03 - Decision Consequence Field Delimitation: To understand if the field dedicated to the consequences of the decision being documented is defined.

Measure: Is the consequence field defined?

0 – No: The consequence field is not defined, leading to a possible lack of clarity.

1 – Yes: The consequence field is well-defined.

FS2: Efficiency and Usability

FS2.01 - Average Completion Time: Is it fast to complete?

Measure: Template completion time (in seconds).

FS2.02 - Number of Mandatory Fields: Does it require filling out many elements?

Measure: Number of mandatory fields in the templates.

FS2.03 - Understandable Structure: To understand if the template sections help in understanding the documented decision.

Measure: Indicate the number of times it was necessary to consult examples, supporting materials, or other research sources to understand how to fill out an ADR template field.

FS2.04 - Objectivity: To understand if the template allows describing decisions without ambiguity.									
Measure: Rate your perception regarding this aspect:									
1 – Very Ambiguous: The template allows vague descriptions without guidance (no examples or lacks mandatory fields for detailing the decision).									
2 – Ambiguous: The structure provides some guidance but still allows generic descriptions.									
3 – Neither Ambiguous nor Objective: The template has distinct fields for decision and context but does not prevent ambiguity or redundancy.									
4 – Objective: Well-defined structure. Each part of the decision has its own place with clear examples to avoid ambiguity and redundancy.									
5 – Very Objective: Enforces clear and direct writing, leaving virtually no room for ambiguity.									
FS3.03 - Recommendation: Is this a template you would recommend for recording architectural decisions?									
Measure: On a scale of 0 to 10, how likely are you to recommend this template for documentation?
